

Make data-driven decisions that accelerate innovation

Unlock hidden insights and bring life to science

Make decisions with speed and certainty across the development lifecycle with the Cortellis suite of life science intelligence solutions.

Discovery & preclinical development

Clinical development & regulatory strategy

Portfolio strategy & business development

Generics development

Have confidence and make data-driven decisions

Applying a unique depth, breadth and quality of data that is enriched with deep domain knowledge, industry understanding and therapeutic expertise, Cortellis is an indispensable part of your workflow – and provides precise, actionable answers to your specific questions.

Robust data

70K+

pipeline products, 340K+ clinical trials, 95K+ deals, 175K+ company profiles

200K+

regulatory reference documents spanning 80 countries

560K+

drugs and biologics across all phases of development

500K+

terms mapped to third-party ontologies

Expert team

650+

professionals spanning all aspects of drug development

~50%

with master's-level degrees; 15% with PhDs

25+

areas of science/ research specialization

Therapeutic expertise

2,600+

covered diseases

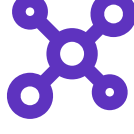

30+

therapeutic areas

For example:

Oncology

Immunology

Vaccines

Respiratory

Rheumatology

Endocrinology

Cardiovascular

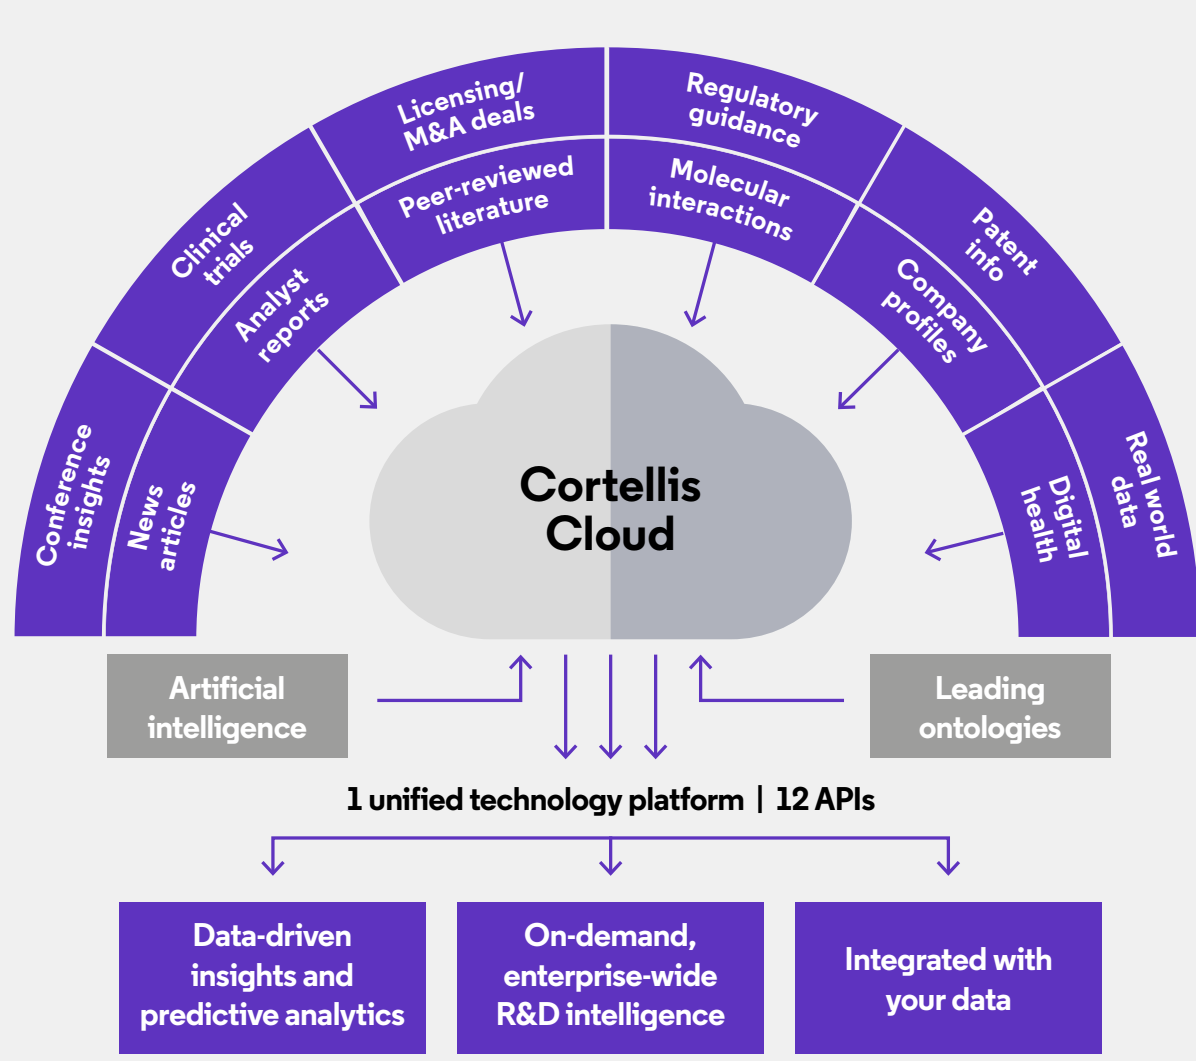

CNS

Gain greater interoperability, connectivity and collaboration

Enhance communication and collaboration across your teams through easy access to enhanced data visualizations, the ability to drill down and/or across data sets, and advanced analytics – all powered by the Cortellis Cloud, an integrated, scalable technology platform that serves as a single point of access for all Cortellis users.

Millions of data points, 1,000s of harmonized sources

Accelerate life sciences innovation

From early-stage start-ups to the world's largest biopharmas, from universities and government entities to drug research and medical device companies, Cortellis accelerates life sciences innovation no matter where it originates.

Pharma/biotech

Generics

Medical device
