

Accelerate drug R&D and avoid late-stage failures

→ Faster, higher-confidence decisions with integrated biology, chemistry and pharmacology intelligence, coupled with AI-assisted competitive insights.

Every decision in drug discovery carries enormous risk:

88%

of clinical drug candidates predicted to fail

40%

of trial failures caused by no clear target-disease link

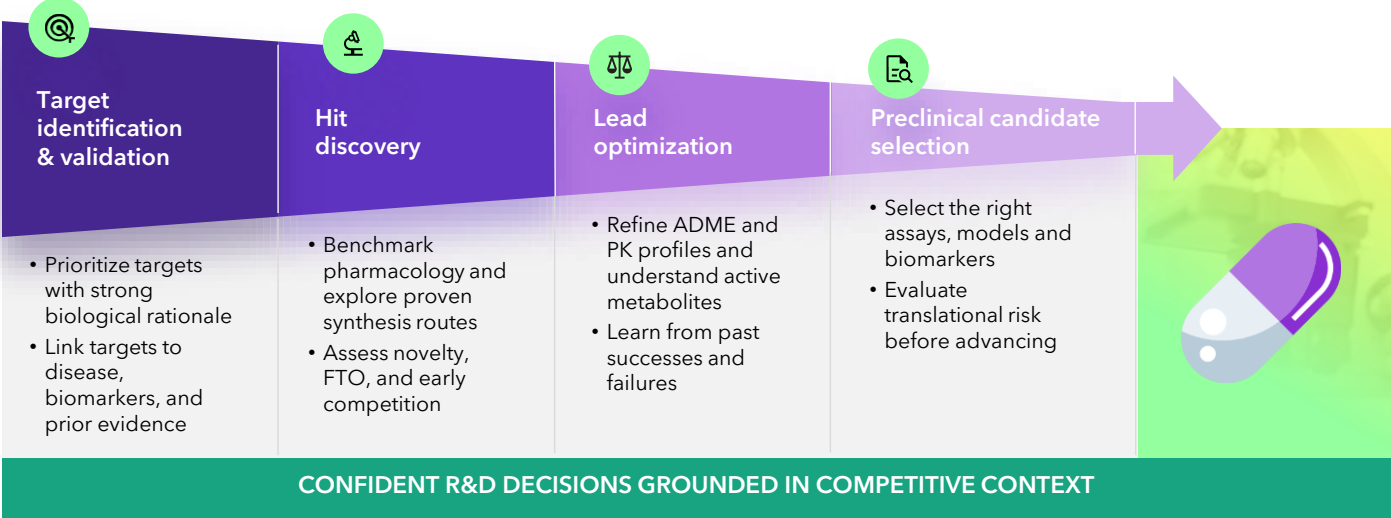

\$2.8B

is the average cost to bring a new drug to market

Evidence-based decisions at every stage of discovery and preclinical development

"For over 10 years, Cortellis Drug Discovery Intelligence has proven instrumental in my efforts for understanding competitive landscapes, monitoring current target developments and exploring disease profiles."

William C. Stafford, CEO, Fulgurite AB

Built for scientists, by scientists

Accelerating discovery and preclinical decisions

"By reducing the time and money spent on manually compiling and tracking all drug development research, we have freed up resources to focus on more value-added work."

Head of Medicinal Chemistry, Italfarmaco

Integrated scientific intelligence

Expert-curated biology, chemistry, pharmacology, biomarkers and pipeline insights—connected in one platform.

AI-powered Drug Discovery Assistant

Conversational, contextual AI that surfaces and synthesizes insights across trusted drug content—accelerating analysis without sacrificing rigor.

Purpose-built for drug development

Designed specifically for discovery and preclinical workflows, it integrates data from patents, literature, conferences, regulatory agencies, and trial registries.

Customized notifications

Stay informed on relevant updates as they happen, so you can act on new evidence faster.

Built on 35+ years of scientific curation expertise:

830K+	drugs and biologics	310K+	experimental models
54K+	genes and targets	728K+	patents
1.8M+	target-disease relationships	3.1M+	biomarker uses
4M+	pharmacology data points	6500+	diseases covered
