The #1 Accounting Solution for Small Business

Popular Product Features

Financial Reporting

Track and generate insights on all financial activities across your business with Sage UBS' comprehensive reporting capabilities. With powerful dashboards & comprehensive library of over 100+ ready-to use reports, you can get in-depth insights into your business. Export your reports to Excel©, and easily customize reports to suit your business needs .

Setup Wizard

Get started quickly and easily with Sage UBS Setup and Transaction Wizards. Designed with the first time user in mind, these tools help to make getting started a breeze .

Remote Access

In-built Mobile license that allows you to work when, where and how you want .

Cashflow Management Tools

- Automate bank reconciliation via bank files or choose to mark items for reconciliation manually against your bank statement.
- Use multiple ready-to-use bank formats to easily submit payment files to your bank.
- Get an overview of all your bank balances for better cash management and the flexibility to perform offset process simultaneously.

Tax Calculations

Configurable tax codes and types (Inclusive and Exclusive) to manage tax related processing for all transactions (sales and purchases) and reporting in the system

User Management

Administrators can manage concurrent user logins, set up user rights and user groups and assign and maintain users to groups .

Data Management

Easily secure your data with our enhanced scheduled back-up functionality. This important allows you peace of mind knowing that all your information is always up-to-date, backed up and protected in case of any disasters .

Transaction Management

- Handle posting processes manually and decide what transactions are to be posted to GL accounts .

- Run month and year-end processes with the click of a button

Audit Trail

Track changes made to any transaction with login ID, date, time, user information & images of changes.

Multi-Company and Multi-Currency

Sage UBS enables you to maintain accounts of multi companies under a single view. You can additionally transact in any currency you wish and all foreign currency transactions can be posted in your home currency.

Quick Entry

A double entry procedure where the user only needs to key in one side of the transaction, and the corresponding side will be automatically handled by the system.

Fixed Assets

Configure asset codes with appropriate handling of depreciation by the depreciation method selected, disposal, write-offs and more.

Budget Management

Sage UBS tracks original estimates of costs, revenues and resources over a specific period and provides variance reporting against actual values for easy budget management.

Goods Received Notes

Sage UBS helps you understand, sort and group the goods that you have received by category. You can have different numbering for different types of GRN enabling you to have greater visibility and insight into your goods received.

Price Management

Configure different pricing schemes for different goods and customers at any point. As an example: you can provide discounted pricing for goods set to expire soon or provide better customer pricing for your most loyal customers. This flexibility in pricing helps you maximize profits whilst enabling customer satisfaction and loyalty.

Barcode Management

Sage UBS provides powerful functionality essential for small manufacturers. Our barcode feature easily inputs barcodes made up of patterned bars, spaces, numerals and converts it into price and inventory information for direct input into UBS seamlessly

Bill of Materials

Sage UBS provides powerful out of the box templates to help small manufacturers manufacture an end product with just a few clicks. Users can easily enter, store, and manage raw materials, sub-assemblies, intermediate assemblies, sub-components, components and parts.
